

Summary

DevOps Engineer with hands-on experience building and automating cloud-native infrastructure using Terraform, Kubernetes and Infrastructure as Code (IaC) and. Skilled in designing CI/CD pipelines with Jenkins and Argo CD, along with monitoring using Prometheus and Grafana. Focused on delivering reliable, secure, and highly available systems.

Technical Skills

Cloud: AWS (EKS, EC2, ECR, VPC, S3, IAM, Route 53, ALB, Lambda, Fargate, CloudFormation)

Containers & Orchestration: Docker, Kubernetes

CI/CD: Jenkins, GitHub Actions, Argo CD

Configuration Management: Ansible , Terraform

Monitoring & Observability: Prometheus, Grafana

Scripting & Programming: Shell Scripting, Python, Java

Web & Database: NGINX, MySQL

Tools & Systems: Git, Linux, Cloudflare

Experience

DevOps Engineer

JPL (Jio Platforms limited)

Sep 2023 – Present

- Provisioned scalable AWS infrastructure using Terraform to eliminate manual setup and ensure consistency, by designing reusable modules for VPC, subnets, and EKS, reducing environment setup time by ~70%.
- Containerized legacy Java applications using Docker to resolve compatibility issues on modern environments, by creating custom images and dependency configurations, enabling consistent deployments across development and production systems.
- Built and deployed a production-grade application stack using Jenkins, Docker, Kubernetes, and NGINX on AWS to achieve scalable and reliable deployments, by implementing CI pipelines, container orchestration, and load balancing, improving deployment reliability and reducing manual intervention.
- Implemented CI pipelines and monitoring solutions using Jenkins, Prometheus, and Grafana to automate build, testing, and system observability, by integrating build stages, alerts, and dashboards, reducing deployment errors and enabling faster issue detection.

Projects

1. AWS EKS CI/CD Pipeline with Jenkins & Kubernetes (Multi-AZ) [[GitHub Repo ↗](#)]

- Designed and deployed a multi-AZ, highly available Django application on AWS EKS using Terraform, ensuring scalable and fault-tolerant infrastructure.
- Built end-to-end CI/CD pipeline for cloud-native deployment with Jenkins (dynamic agents), Docker, and Kubernetes, enabling automated build, scan, and zero-downtime deployments via ALB.

2. GitOps CI/CD Platform with Kubernetes Auto-Scaling & Observability [[GitHub Repo ↗](#)]

- Designed and implemented a GitOps-based CI/CD platform using Kubernetes and Argo CD, enabling automated, declarative, and self-healing deployments across dev, staging, and production environments.
- Built end-to-end pipelines with GitHub Actions and integrated HPA and Cluster Autoscaler for dynamic scaling, along with Prometheus and Grafana for monitoring, alerting, and system observability.

Education

Bachelor of Electronics and Communication Engineering

University BDT College of Engineering | Aug 2019 - May 2023 | 8.02 CGPA
